CrowdStrike® Falcon Prevent™

A Solution in the Fight Against Ransomware

Introduction

Ransomware can rapidly infect systems and spread across a company, creating serious problems for a business and its employees. Ransomware often begins with a phishing attempt. This is when an employee receives an email that appears legitimate, but actually contains malicious links or file attachments. The contents of these emails can allow an adversary to encrypt files on the company's device and network drives, effectively locking the files and making the system inaccessible. Adversaries will then demand a ransom payment, often in Bitcoin or other cryptocurrencies, in order to relinquish access to the company files. What makes a ransomware attack even more effective is its ability to travel through a company's network, starting from only a single compromised access point.

To help you to mitigate threats to your data security, Chubb often provides its insureds with lists of pre-approved third-party privacy and network security loss mitigation vendors. CrowdStrike may be able to help your company increase its data security.

CrowdStrike can help you to curtail the ever-growing threat of ransomware.

CrowdStrike's NextGen AntiVirus software, Falcon Prevent, helps to lessen the likelihood that an organisation's personal computers will be subject to ransomware attacks from incoming malware, and helps mitigate the spread to other exposed devices on the company's internal network.

Falcon Prevent Highlights

Falcon Management Console - This is CrowdStrike's cloud platform that serves as the central management and reporting hub for your computers - no on-premises hardware or dedicated IT resources are required.

CrowdStrike's Falcon Prevent solution is delivered and managed through a cloud native platform and deployed with a single, lightweight agent, eliminating the need for on-premises hardware or IT resources. CrowdStrike Falcon Prevent uses cloud-scale AI/machine learning and behavioral-based detection to stop known and never-before-seen threats, including ransomware. Falcon Sensors use adaptive machine learning to help detect and block ransomware and malware - including emerging threats or tactics that adversaries may be using.

> **Chubb's Cyber Incident Response Team works with our clients who face ransom demands every day - many of which exceed $1M**

CrowdStrike Express Support provides ongoing support with quarterly health-checks.

How to Access
